

MONEYSENSE HOME MAINTENANCE CHECKLIST: WINTER

www.moneysense.ca/author/romana-king

| TASK | WHY DO IT | HOW TO DO IT | TIME | MATERIAL COST | PRO COSTS |
|---|--|---|-----------------------|---------------|---------------------|
| FOUNDATION: Remove snow from the foundation of your home | The key to preventing expensive foundation damage is to keep water away from your house. Since snow will eventually thaw and turn to water, you can prevent potential flooding and water damage by shovelling the snow away from your foundation. If keeping a "snow-free" moat around your house is a bit too much, consider shovelling snow away from areas more prone to water damage, such as basement windows and concrete steps. | Grab a shovel and start digging. Remember you're doing physical work, so pay attention to over-exertion and make sure you hydrate. | 1 hour to 4 hours | \$0 | \$400/season and up |
| FOUNDATION: Remove ice dams on low-pitched roofs or from gutters | If you decide to ignore ice dams on your roof or gutters come the spring you may find damage to roof shingles and water penetration into your foundation. | For ice-dams on your roof and gutters, use a shovel to clear off accumulated snow and to chip away at already formed ice. | 30 minutes to 2 hours | \$0 | \$400/season and up |
| FOUNDATION: Make sure outside vents (on your roof and external walls) are not blocked by ice or snow | Blocking vents with ice can also cause damage to your roof, but the real danger is that it won't allow your house to properly and effectively heat and cool. This will put pressure on your heating system and could lead to moisture problems (which can lead to mould or rot) in the home's wooden structure. | Use a shovel or brush to clear off accumulated snow and to chip away at already formed ice. | 30 minutes to 2 hours | \$0 | \$200/season and up |
| HVAC: Replace furnace filters | To keep your furnace running efficiently, you need to change the filters every three months. These filters collect air-borne debris and allergens. Keeping a dirty filter means your furnace has to work twice as hard to push out heat. | Slide your old filter out (and put it in the garbage. Slide the new filter in. When in doubt, check your furnace's manual (either hard copy or online). If your filter is not disposable you will need to hand wash the filter to get rid of all dirt and debris. Remember, use a non-toxic cleaner and tap water—nothing else. | 5 minutes | \$20 to \$160 | n/a |
| EXTERNAL: Winterize yard equipment | To prolong the longevity of patio furniture and yard tools, you'll want to winterize and store the items. If not, you may end up replacing these items quicker than anticipated. Given that a good patio set can set you back \$500 or more and a decent gas lawn mower can cost \$300 or more, it's good practice to winterize your outdoor gear. | Patio furniture: Wipe down the furniture. If possible, stack and store the furniture out of the elements (in either a shed or inside your garage or home). If you don't have space consider stacking and covering the furniture premade covers or a tarp. The point is to eliminate exposure to the elements. For garden tools, make sure you find a place where you can store the tools out of the elements, but before you store and cover the machines, make sure you drain the oil. Oil in unused tools gets sludgy and makes the engine work harder (and makes the tool more inefficient). To prolong the life, drain the oil (there's always an oil cap) just make sure you store the waste in a leak-proof container that can be taken to your local hazardous waste facility. | 1 hour to 6 hours | \$0 to \$200 | \$75/machine and up |
